cadwork 3D A modeler or nothing...

... The power to serve your most incredible projects ...

cadwork is the only software specialized in wood construction that adapts to you, offers you automation only when you want it, and helps you in the smallest worksites as in the biggest works.

Ultimate flexibility and speed at the end of your mouse

Do you know the advantage of using a 3D modeler? Your only limits are what you impose on yourself. Whatever you imagine, you can draw it. Get off the beaten path and formatting, cadwork is your tool and it is you who masters it.

INTUITIVE

Whether you're a technician, a carpenter or an engineer, whether you're a designer, or a manufacturer, whether you're from an old or a new generation, the cadwork tools are there to help you use your drawing and design skills.

On one side the most powerful drawing board, with the auxiliary lines feature that allows you to make the most beautiful sketches, and on the other side, the most powerful modeler, allowing you to work the most complex 3D shapes.

SIMPLE

The DLT menu - Design Like you Think is the secret of cadwork to be easily usable in production after only 2 days of training. The DLT is the shortest path between what you think and the action of drawing. Simple functions, which describe an action on the active elements, to draw naturally and intuitively, even if you are not a drafting professional.

You spend your time between office and worksite ?

Trying the cadwork DLT is adopting it. There is no need to repeat training between two sessions of use, or to leave your mouse over the icons to remember which actions they are associated with. Think, draw and pick up where you left off.

HELP DESK

Suggesting help when you ask for it is the basic rule of the cadwork modules.

Elementation, Roofing, Staircase ... You can do it all alone thanks to the 3D modeler, or on the other hand, you can use our accompanying programs to build your models as quick as possible according to your rules.

Because standardization is the best way to reach a wide audience, cadwork offers you as standard from the basic installation of some supplier catalogs, lists of materials, predefined parametric elements and types of automatic assemblies.

Do you think our standardized elements are incomplete? Are you missing something?

Simply create your own libraries from your projects and needs or import catalogs from official suppliers.

MATERIALS AND CONNECTIONS

Create volumes, beams, panels, bolts, surfaces, curved volumes, points, lines, walls, doors, windows, and more directly in 3D. All these elements are assembled in the same project, as you decide. Whether it's wood with metal, concrete, stone, glass, or even fittings with bolts.

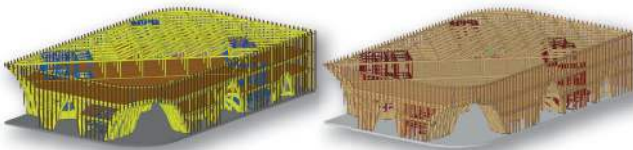

Select assembly automations such as tenons, dovetails, laps, recesses, or if you wish, draw your own assembly by cutting the elements according to your needs, without limit.

SECURED

Move back in time ... Editing tools can save you valuable time throughout the day, but a wrong move and it's all your work that could be compromised. Undo your last actions in cadwork as simply as you have performed them.

Be confident ... Your work is drawn, but a mistake is made so quickly ... Trust the cadwork control tools. One element positioned on another, a collision, a misaligned tenon, a bolt too short ... cadwork checks everything, all the time and at your request.

Be serene ... cadwork manages your backups. Choose the locations, numbers, and intervals between backups based on your business policy.

CADWORK IS DESIGNED FOR YOU!

Make the right choice with the 2-month free trial. You will be able to test our team and our performant technical support.

In fact, the most powerful software is nothing if you are not well-trained to use it.

INTEROPERABLE

We are not talking here about the fashion effect, but simply about the fundamental philosophy of cadwork: Minimize retyping to maximize your expertise.

Enjoy one of the most open software on the market, import and export with more than 20 formats read and written, obviously including the IFC.

THE ULTIMATE PRODUCTION TOOL

The 3D model is realized? Production can start.

Export from the 3D all desired plans (masonry plans, shop drawings, fitting plans, assembly plans, assembly details ...), edit your order lists by type of items, your production lists by destination, or export your machine files for cutting, assembly and welding.

Improve your production with cadwork optimization and manage your inventory with list compatibility with the largest ERP software packages.

Use the Cadwork Forming Detection Engine to produce pre-dimensioned piece-by-piece drawings and exports to machines of incredible quality and speed.

Simple and intuitive software

Efficiency - Flexibility - Speed - Quality.

The flexibility, speed and quality of the preparation are today essential to any company wishing to keep up with the competition. The numerous possibilities of cadwork and its simplicity make it an indispensable tool allowing you to strengthen your position on the market.

"Try and buy option:

Following a 2-day training course, you will benefit from a 2-month free trial installation, without obligation to purchase. During this time, you have access to the modules of the full version of the software and all our services, including phone support."
